AH & JGM. 2023. Recursive Rows in Rome. 1, 1 (November 2023), 8 pages. https://doi.org/10.1145/nnnnnnn.nnnnnnn

#### 1 INTRODUCTION

## 1.1 The expression problem, in full

1.1.1 Seeking solutions sans encodings.

#### 1.2 Recursion and rows

- 1.2.1 Row type systems with term- or type-level  $\mu$ . There are none.
- 1.2.2 Structural typing of objects in recursive record calculi.

## 1.3 Challenges to practical extensibility

- 1.3.1 Polymorphic variants in OCaml.
- 1.3.2 Inheritance is not subtyping.

## 2 ROME: A ROW THEORETIC FOUNDATION FOR (CO)INDUCTIVE DATA TYPES

### 3 Rω-HIGHER ORDERED ROWS

Recursive types have a well known semantics as the least fixed-points of type-level operators.  $R\omega$  is the only row calculus (to our knowledge) to include an (explicit) type-level  $\lambda$  operator. Like with  $F\omega$ , this necessarily sacrifices desirable metatheoretic properties, such as principality of types; hence, like  $F\omega$ ,  $R\omega$  may serve as a highly expressive intermediate or target language. Correspondingly, we perceive the addition of recursive terms and types to  $R\omega$  to aid the adoption of recursion in surface languages.

We review the relevant syntax and typing of R $\omega$  now.

(Todo). It will be a challenge to trim this down, as [?] does with [?].

## 5.2 Typed translation

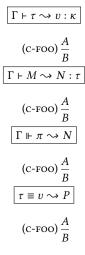

Fig. 8. Translation of  $R\omega$  derivations to Ix derivations

## 5.3 Properties of Translation

Theorem 1 (Translational Soundness (Types)). *if*  $\Gamma \vdash \tau : \kappa$  *such that*  $\Gamma \vdash \tau \rightsquigarrow v : \kappa$  *then*  $(\Gamma)^{\bullet} \vdash v : (\kappa)^{\bullet}$ .

THEOREM 2 (TRANSLATIONAL SOUNDNESS (TYPE EQUIVALENCE)). *if*  $\Gamma \vdash \tau_1 \leadsto v_1 : \kappa_1$  *and*  $\Gamma \vdash \tau_2 \leadsto v_2 : \kappa_2$  *such that*  $\tau_1 \equiv \tau_2$  *is derivable in*  $R\omega$ , *then*  $(\Gamma)^{\bullet} \vdash v_1 \equiv v_2$ .

The next theorems presume an  $R\omega$  instantiation of the simple row theory.

Theorem 3 (Translational Soundness (Row combination)). *if*  $\Gamma \Vdash \rho_1 \cdot \rho_2 \sim \rho_3 \rightsquigarrow N$  *then*  $(\Gamma)^{\bullet} \vdash N : foobar$ .

Theorem 4 (Translational Soundness (Row containment)). if  $\Gamma \Vdash \rho_1 \lesssim \rho_2 \rightsquigarrow N$  then  $(\Gamma)^{\bullet} \vdash N : foobar$ .

Finally,

Theorem 5 (Translational Soundness). *if*  $\Gamma \vdash M : \tau$  *such that*  $\Gamma \vdash M \rightsquigarrow N : \tau$  *then*  $(\Gamma)^{\bullet} \vdash M : (\tau)^{\bullet}$ .
